

ON SITE
OraLab®

**Marijuana is no
longer safe from
oral fluid detection**

New On•Site® OraLab® detects "under the influence" drug use for six drugs — even before they're metabolized. And, its **detection level for parent THC is lower** and the **most accurate** in the industry. With **less than half the steps required by other oral fluid tests**, OraLab's no mess design is truly simple and easy to administer. Its testing process is **100% observable** and eliminates the need for special facilities or gender-specific staffing, which makes specimen tampering less likely. A **unique, patent-pending expresser** and single tube design allows you to **collect and store sufficient saliva** (can be measured and observed in the tube) for both immediate and confirmation testing.

Rapid drug test solutions that secure your world™

VARIAN

OraLab features onsite accuracy you can trust

Seal and ship a presumptive positive result for confirmation right in OraLab's tamper-evident container.

Three simple steps – collect, test, and store – can be administered in 10 to 15 minutes.

Patented feature on test card enhances readability.

Collector absorbs sufficient saliva for both immediate and confirmation testing.

Expresser has locking device, so when the collector is removed it is drip-free.

Simultaneously tests for amphetamine, opiate, cocaine, PCP, methamphetamine, and THC (marijuana). Also available in a 3-panel that tests for amphetamines, opiate, and cocaine.

For instructions on how to administer OraLab, go to www.varian-onsite.com.

Varian, Inc. is a major supplier of scientific instruments, diagnostics, laboratory consumable products, NMR, and vacuum technologies. Once a part of 50-year old Varian Associates, Inc., Varian, Inc. became an independent company in 1999, blending the innovative spirit of a new enterprise with a half-century of experience.

The diagnostic group of Varian, Inc., the acknowledged expert in all phases of clinical toxicology and onsite drug testing, offers a total solution...from confirmation and adulteration testing (GC/MS and LC/MS) to broad spectrum testing (TOXI•LAB®). These products are complemented by our Web-based operator training and certification program, 24/7 technical support, and the expertise of our toxicology, workplace, and criminal justice consultants.
